One grid square on this plan represents one hectare.

AREAS: Area measurements to plan edge only. The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 8400..... parcel number
1820ha..... area in hectares
4.47..... area in acres

When identifying a parcel it is important to specify the number of the plan on which the parcel is shown and the County Council. To convert acres to hectares multiply by 0.4047.

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows:-

Table showing Easting and Northing coordinates for a point.

EXAMPLE: EASTING: Take west edge of 100 metre square in which point lies and read the figure opposite this line on the north or south margin. Estimate tens of metres from grid line to the point. NORTHING: Take south edge of 100 metre square in which point lies and read the figure opposite this line on the east or west margin. Estimate tens of metres from grid line to the point.
